

Roadmap for monitoring to inform the delivery of healthy freshwaters and wetlands in Scotland

Current monitoring

Feature based within the protected area

Monitoring focused mostly on structural impact indicators

Initiating collaboration

Incorporate wider landscape data from partners

Focus on pressures and functional indicators in a multi-index framework

Use ecosystem specialists to develop indices

Strong partnerships

Wider data sharing agreements established

Specialists develop guidance and templates for application of framework

Full integration

Data input from 3rd parties is automated

Specialist input reserved for review of indicators, research and operationalising new monitoring techniques
